TECHNICAL SUMMARY

UX/UI Designer and Front End Developer with a passion for creating great user experiences. I love visual design and have experience running usability tests, prototyping, creating mockups/wireframes, and with iconography. I sometimes dabble in angular development and understand development restrictions when doing design work. I have a strong willingness to learn and try to keep up to date with the latest in design and development.

PROJECTS

Cubed CSS - Cubed CSS is a framework I am writing in Sass for easily creating lightweight, responsive, and accessible web interfaces. It's currently a work in progress, but currently has a fluid grid system based on flexbox, custom SVG form elements, and a few other components.

CBORD Patient - This is an app I've been designing and developing recently for CBORD. It's written in Angular using the Ionic framework and allows patients in a hospital to order food without exceeding their dietary restrictions. I've been largely contributing towards conducting usability tests, design, and front end development.

Portfolio - Designed and created my own portfolio website to showcase my recent projects and skills as a developer. Running on an Ubuntu server and using Node.js and Nginx. Configured with SSL using a Let's Encrypt certificate. ([Link to Portfolio](#))
